### Mission Statement:

The Historic Preservation Training Center (HPTC) is dedicated to the safe preservation & maintenance of National Parks or partner facilities by demonstrating outstanding leadership, delivering quality preservation services, and developing educational courses that fulfill the competency requirements of Service employees in the career fields of Historic Preservation Skills, Risk Management, Maintenance and Planning, Design and Construction.

### Superintendent's Message

#### Preserving America's Treasures ... A View from the Scaffolding

Even after twenty years of service as the Superintendent of the Historic Preservation Training Center (HPTC), I still enjoy climbing a scaffold surrounding one of our projects for the opportunity of seeing the high work both at close-hand and to enjoy the perspective of the site from a lofty perch. For most, scaffolding on historic buildings is tolerated as a temporary construction impairment. Scaffolds are hard work to erect, present hazards to both workers and visitors, and their transitory nature masks the engineering beauty of a well constructed scaffold, yet scaffolding is critically important to accomplish the work. A historic structure wrapped in scaffolding is a signal that our work is in progress. I like to see scaffolding go up and enjoy it even more when we take it down.

The view from the Marmion Row scaffold of lower town Harpers Ferry was stunning. Another HPTC scaffold at the John Brown Museum is seen on the right.

If I imagine looking back over the last two decades from my scaffold perch into the past, I can see how far our Center has progressed, and I am confident

The HPTC staff gathers for a 2010 photograph taken in the Woodcrafting Shop within the Jenkins Cannery.

envisioning a future horizon that continues the success we have achieved preserving America's Treasures. Twenty years is a long time to measure results, and the hundreds and hundreds of significant projects we have completed constitute a sizeable body of work. Without a doubt, I can say that Fiscal Year 2010 was the most productive year in the history of our Center. Despite the down economy and all the threats that we as a nation face, both at home and abroad, teamwork at the HPTC made this a remarkable year. We were safer, trained more NPS maintenance employees and partners, conserved more historic buildings and monuments, and made real progress towards securing a lease extension for our future facilities at the Jenkins Cannery in Frederick.

## Superintendent's Message (Continued)

We have found that practicing shared leadership in our organization from the Superintendent to the Project Crew Leader, combined with the least amount of structure, promotes and supports the full engagement of our staff. Whatever we undertake, from training events to project completion, all do their work with focus, enthusiasm, and passion.

Regardless of the nature of our engagement: an individual assignment as an instructor at a workshop or training event, or on a broader scale, as a project crew member, our clients and partners can count on HPTC employees to follow through.

The fusion of learning and development with preservation practice creates a compelling purpose for our employees. Of course, the great mission of the

Deputy Superintendent Chris Robinson visits HPTC Maintenance Mechanic Jamie Burrier and Exhibit Specialist Nate Ramsier atop the Marmion Row scaffold at Harpers Ferry.

National Park Service is also of tremendous benefit and motivation. I also like to think that our HPTC teams embrace an organizational culture that nurtures unexpected learning. As our teams stretched to complete a 2010 workload with a plethora of projects and training events, on a magnitude unlike any previous fiscal year, we saw and heard learning happen for ourselves and for our partners in many unexpected places. At the end of the year our staff and program participants had enhanced their skills, knowledge, networks, self-awareness, and sense of potential. Shared hard work, challenges, and accomplishments bond us together at the HPTC. Similar to the task of erecting

scaffolding high above the ground, the work we do causes us to rely on, commit to, and follow through with each other every day.

Our foremost operational concern is the safety and health of our employees, partners, and training participants. As of the last day of FY10, the HPTC had gone 240 days without a Days Away, Reportable, or Transfer (DART) injury. We believe the dramatic improvement in the 2010 HPTC safety rates is directly attributable to the 100% participation of our staff in Operational Leadership training.

The HPTC has two certified instructors who presented three OL training classes in 2009 and 2010. The HPTC staff met our 100% OL participation goal when the final training class was completed in February 2010.

Funding for the Centers Learning and Development programs was increased by 26% over FY09 levels. Without increasing staff, the HPTC Training Managers put these funds to use with our partners by developing and presenting 47 learning events and workshops in FY10. We also continued the work started last year of creating a Maintenance Training Academy. The FY2010 learning and development totals for the HPTC were 29,670 Learning Hours delivered to 774 NPS employees. The breakdown of the data over the past three fiscal years is as follows:

Historic Preservation Skills and Crafts-

-FY10: 25 events, 369 participants, 16,106 Learning Hours.

-FY09: 22 events, 341 participants, 20,272 Learning Hours.

-FY08: 16 events, 283 participants, 21,058 Learning Hours.

## Superintendent's Message (Continued)

### Maintenance-

- FY10: 22 events, 405 participants, 13,564 Learning Hours.
- FY09: 15 events, 263 participants, 9,456 Learning Hours
- FY08: 19 events, 203 participants, 8,120 Learning Hours.

In addition, the 2008-2010 Preservation and Skills Training (PAST) Class of 8 mentors and 17 trainees attended their *Final Stroke* completion ceremony at Marsh-Billings-Rockefeller NHP, this past Spring, where both participants and mentors received Certificates of Completion. This was the seventh consecutive class of participants to complete the PAST program which began in 1995.

The shared purpose of our Center helps us sustain and expand our partnerships. We grow and sustain these relationships by working together with our partners year after year. Preservation and learning often is their passion as well, and this creates bonds that last for a decade. For example, throughout the year we continued our very productive partnership with the California State Park Training Program at the Mott Center. The HPTC supported six Mott training events that were attended by NPS employees.

On the reimbursable preservation project front, the HPTC aggregate workload of projects completed in FY10 resulted in an outstanding accomplishment. For the tenth consecutive year, the HPTC staff preservation services and training events output surpassed the records established the previous year. The 2010 Center work effort was highly efficient and very productive and marked the first year the Center has completed over \$9 million in project and training work. Throughout the past fiscal year our partners and clients continued to select our Center as the provider of choice for their single-source preservation services and training needs. As of September 27, 2010, the HPTC FY10 Project & Training List showed a total of \$9,181,701 in historic preservation and training projects completed for the year.

When the President announced the America Recovery and Reinvestment Act of 2009 (ARRA), we at the HPTC felt we had to lead in providing visible completion results for "shovel ready" projects rather than follow. By the conclusion of FY10, the HPTC had completed twelve ARRA projects that contributed \$2,456,657 to our FY10 total.

- ◆ The HPTC completed 73 projects in 2010, ten more projects than were completed in 2009.
- ◆ The HPTC increased reimbursable project construction completed by a margin of more than 20%.

The real story of our work in 2010 is better told by images rather than words. I hope the readers of this 2010 HPTC Annual Report will take some time to review the following illustrated pages which depict our work in 2010 on many of America's Treasure's. Finally, I want to thank my partner and the Chief Operational Officer of the HPTC, Deputy Superintendent Chris Robinson for his outstanding leadership in 2010. Working at the Center for me is both an honor and a pleasure, and I also want to thank our Team Leadership, our project crews, our Training Managers, and our administrative staff for all their efforts .....and finally, thanks to all our partners and clients for your support of our work.

H. Thomas McGrath Jr. FAIA-FAPT  
Superintendent

## Carpentry Team

The Carpentry Team Project—Palmer-Epard Cabin at Homestead of America National Monument.

A "Before" condition photograph of the 143 year-old Palmer-Epard homesteader's cabin.

The HPTC Carpentry Team carefully documented and assessed the condition of every log component during disassembly.

Where existing roof rafters were too deteriorated to allow re-use the team installed "in-kind" replacements.

This one pen cabin was re-assembled at the new site on a new foundation. A new shake roof was installed.

The "After" photograph of the cabin shows the relocated structure in a more historically accurate natural prairie landscape.

Visitors can now walk to the cabin from the new Heritage Center of the Homestead of America National Monument seen in the background.

## Carpentry Team

### Reconstruction of Lock #22 — Chesapeake and Ohio Canal NHP

This view shows the Chamber of Lock #22 following dewatering and before repair work began

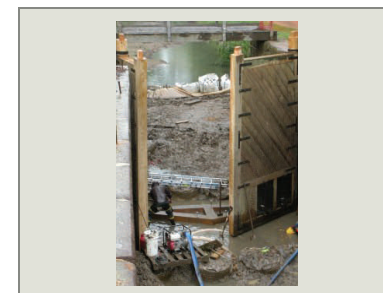

New lock gates and hardware were manufactured offsite by the HPTC Carpentry Team.

Work on this project occurred during the 2010 Winter and Potomac River flooding became a severe challenge.

The upper lock gates are being delivered to the site for installation. The Masonry Team repaired the lock stone walls.

The working conditions in canal lock chambers are difficult, dirty, and hazardous. The HPTC crews completed the work without an accident.

This "After" photo depicts the newly positioned lower lock gates with refurbished paddles and hardware installed.

The Masonry team erected an extensive scaffold along the gable end of the Lemon House prior to commencing the work.

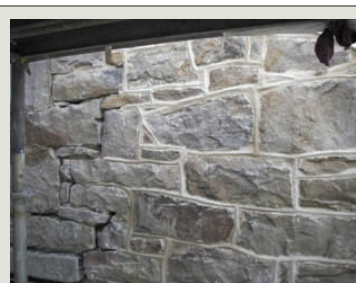

Scaffolding was also placed at the rear porch of this former tavern. It served travelers on the first inclined plane railroad to cross the Appalachians.

A major task of this project was to first rake out existing Portland cement mortars.

Lime based mortar consistent with that taken from historic samples was used to repoint the Lemon house stone masonry.

This photo clearly depicts the new ribbon joint mortar work that replaced the inappropriate Portland cement mortar.

This "After" shows the east elevation. At the Final Inspection the park commended the Masonry Team for minimizing the impact of the work on the visitors and for keeping the work site clean.
